Preparation assignment 1 - Remembering Calculus I

Estimated time: 5-15 minutes.

Point value: 1 point.

Goals: Recall some of the things from Calculus I that you are comfortable with, so you can use those strengths to help you succeed in Calculus II. Identify the parts of Calculus I that were difficult for you, so you can address them and move forward smoothly this semester.

Take out a separate sheet of paper.

Think back to what you remember from calculus 1, and write down:

- 1) One topic you either really liked or genuinely understood.
- 2) One topic you either really didn't like or had a hard time understanding.
- 3) (*Bonus:*) If you're up for it, write down a short explanation, or elaborate on anything you'd like me to know about.
